

VIVAMAX

Viva Max® Specification

1. Fertilizer is thick liquid form, dark brown in color and without undesirable odor
2. Animal- based
3. Formulation adjustment for fast and effective absorption in foliar application
4. Ingredients: nitrogen, potash, iron, micronutrients and amino acids
5. 100% water soluble
6. Miscible with all chemical fertilizers and pesticides
7. Neutral PH and without burning effect
8. Root and leaf absorption (used in irrigation and spraying)

Composition

N..... 2.2 %	OM 30 %	Total Amino acids 5 %
K 3.8 %	OC 15 %	Free Amino acids 0.5 %

Application Time:

The best time for fertilizers application, which contain micro-nutrients and amino acids, is before the start of reproductive growth period (before flowering) and during reproductive period (after the seed formation and during seed and fruit growth period)

- 1.The first application: before seed formation
- 2.The second application: after grain formation and growth

Application Method:

- 1.Irrigation system
- 2.Foliar spraying

Dosage:

1.Crops: 4 liters per acre in each of application turn, We recommend that coping with environmental stresses (drought, temperature stress, ...) apply at least two doses of Viva Max

season.

3.Trees: Recommended dosage for each use:

Sapling and fruiting trees (Small size): 150 – 100 ml

Fruiting trees (Medium size): 250 – 200 ml

Fruiting trees (Large size): 350 – 300 ml

Viva Max® Advantages:

- 1.In the first application, in compare with other chemical and natural fertilizers, Viva Max cost more affordable.
- 2.In the repeated application, other fertilizer demand and total fertilization cost will get decrease.

General Recommendations:

- 1.Dilute fertilizer with plenty amount of water.
- 2.After dilution with water, stir the mixture well.
- 3.Spraying in the early morning or evening.
