

Application Time:

The best time for consumption of fertilizers containing amino acids is before flowering and during the reproductive period (after the formation of seeds and grow during seeds or fruits).

1-First time use: Before pollination

2-Second time use: after the formation of seeds or fruits (during their growth period)

Application Method:

1-In irrigation system

2-Foliar spray

Dosage:

1-Crops: 4 liters per hectare acre in each of application turn, We recommend that during the growing season to supply the necessary ingredients for proper growth apply at least two doses of Viva Q10®.

2-Trees: Recommended dosage for each use:

Sapling and fruiting trees (Small size): 150 – 100 ml

Fructing trees (Medium size): 250 – 200 ml

Fructing trees (Large size): 350 – 300 ml

Viva Q10® Advantages:

1-Viva Q10® is a natural fertilizers and has no chemical additives.

2-It has no harmful effect on consumer's health.

3-If it be used at the right time (before germination of weed seeds - grasses), can be effective in controlling weeds.

General Recommendations:

1-Dilute the fertilizer with plenty of water.

2-After dilution with water, stir the mixture well.

3-Spraying in the early morning or evening.

4-Avoid spraying if there is chance of windy or rainfall.

5- Do not use fertilizers

VIVAQ10

Viva Q10 Specifications

- 1-Fertilizer is in liquid form thick, amber and with good odor
- 2-Plant-based
- 3-Water soluble
- 4-Particle size decreasing to improve the foliar absorption and effectiveness
- 5-Simultaneous use with other kinds of fertilizers and pesticides
- 6-Absorbed by the roots and leaves (can be used in irrigation water and spray)

Composition

N..... 2 %	Ca 1000 ppm	OM 20 %
P..... 2 %	Zn 45 ppm	OC 11 %
K 1.7 %	PH 5.5	
Total Amino acids 9 %	Free Amino acids 6 %
